

Module: Post Mortem and Investigation

Overview

Post mortem investigations are essential for determining the causes of death in accident scenarios. Standard hospital pathologists conduct examinations to identify trauma or other contributing factors.

Coroners may employ specialized techniques to enhance investigations, including image-based and full forensic analyses. These enhanced methods provide detailed insights into circumstances surrounding deaths, aiding legal and safety assessments. Basic defense and reasoning to the coroner involve presenting evidence clearly and accurately.

This collaboration ensures a thorough understanding of the incident and supports legal processes. By adhering to rigorous post-mortem protocols, investigators can uncover critical information that informs safety improvements and reduces future risks.

Programme Code M_PM

Programme Outline

- Standard hospital pathologist
- Coroners special - enhanced hospital
- Image based
- Full forensic
- Basic defence and reasoning to Coroner

Programme Class Classroom face-to-face

Contact Hours 4 hours

Certificate Certificate of Completion
