

Module: Development of Safety Recommendation

Overview

The development of safety recommendations is a critical component of accident investigations. The ICAO defines a recommendation as a suggested course of action to enhance safety, distinct from mandatory directives that require compliance.

Striking a balance between recommendations and mandatory measures is essential for effective safety management. Effective recommendations are clear, actionable, and based on thorough analysis of the investigation findings.

Guidance for writing recommendations includes ensuring they address identified issues and are feasible for implementation. By developing well-founded safety recommendations, organizations can significantly improve safety practices and reduce the risk of future accidents, fostering a culture of continuous improvement.

Programme Code M_SR

Programme Outline

- ICAO definition of a recommendation
- What is the difference between recommendation and mandatory?
- How to strike the balance?
- How to define an effective recommendation?
- Guidance to write recommendations

Programme Class Classroom face-to-face

Contact Hours 4 hours

Certificate Certificate of Completion
